

**TTS Composite  
Replacement Lids  
for retrofitting  
onto C/1/9 & C/1/43  
concrete bases**

Trackside environments are littered with cumbersome and often broken concrete troughing lids. At the request of key clients, TTS have developed a composite lightweight lid which can be retrofitted onto C/1/9 and C/1/43 concrete bases, which invariably remain solid and intact.

Made from recycled materials, the TTS Replacement Composite Lid

is compliant with the Network Rail manual handling regulations for a single-man lift and is conducive to rapid installations, making it a compelling product for maintenance teams across the network.

For further information please contact the TTS customer services team on **01302 343 633**, or email **info@ttsrail.co.uk**

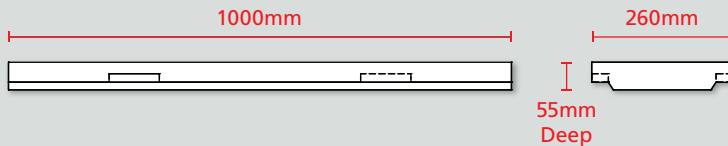

## Technical Specifications

Both lids are easy to handle with finger recesses moulded into the underside to prevent trapped fingers.

Lids weigh 16-18kg.
